

## Pre-Bonded Panels

McKillican offers pre-bonded High Pressure Laminate panels and Architectural Wood Veneer panels from a variety of sources. All suppliers are proven quality providers, with strong reputations for completing custom panel lay-ups on time and on budget.

### Custom Plastics

The Custom Plastics panel division specializes in manufacturing high pressure laminated panels, with two Black Brothers 5 x 12 presses. Those sizes range from 30" x 96" through 60" x 144". All boards are pre-cleaned in a Black Brothers panel cleaner, and the adhesive is applied with a mechanical Black Brothers glue spreader, which assures a consistent glue line.

This division does all of its cutting on two Holzma Computerized Saws, which utilizes our cut-rite program. This program is stored in our computer, where a board library is maintained, thus allowing our programmer to input various sizes, up to 60" x 144". Both our new 5x125 Holzma Saws allows us to cut extremely accurately, within 1/3 of a millimeter.

We offer component manufacturing for large projects, such as fixtures for retail stores, millwork for commercial projects, Gaming Machines, Class 1, Fire-Rated Wall Panel Systems for Jet Bridges, Schools and hospitals, including State and Federal projects.

We take great pride in our Fire-Rated Panels, with a Class I Rating. This Fire-Rated Panel is certified by Underwriters Laboratories, and has gone through extensive burn testing, on 3/8" board up to 1-1/8" board, utilizing Wilsonart, Nevamar, and Formica. This panel is an Underwriters Laboratories Classified Panel. We are also Certified to manufacture Class II and Class III on Plywood and particle board utilizing Formica Brand Laminate. Our Fire-Rated capabilities also allow us to press a Marine Board-Class I Fire-Rated using a Calcium Silicate Marine Core. This provides you with a moisture resistant panel, using Wilsonart or Formica.

### COMPONENT CRAFT

### Component Craft

As a McKillican International company, Component Craft excels at providing quality products built to customer specification, within very short lead times.

If you don't have enough capacity for laminating, or have that larger project with some unique specifications, or just want to spend your labor dollars on cabinet-making instead of laying up laminate, call on McKillican and Component Craft for help.

We offer pre-bonded high pressure laminated panels with substrate cores of particleboard or medium density fiberboard, and any surface combination including Wilsonart, Formica, Nevamar, Pionite, or Arborite. Face laminates can be used for backs, or chose inexpensive brown backers or cabinet liners.

Glue lines are provided with waterproof Wilsonart 3100 PVA adhesives, providing a rigid permanent bond. We can handle any quantity, with extremely short lead times. We can also offer quotes on cut-to-size, banded and bored project needs.

## Flexible Materials

Why would you buy your Architectural Panels from a company named Flexible Materials? It's simple...Flexibility is the key to giving you what you want, when you want it. After 69 years of successfully supplying the woodworking industry and the architectural design community with Flexwood®, we not only know what it takes to supply your needs, we have also developed the organization and the processes which will enable us to meet your needs reliably and consistently. Here are just a few of the reasons why we think we can earn your business

### QUALITY

There is a big difference between "commodity plywood" and Architectural Panels. We not only understand that difference, we assure it by using the finest wood veneers and core materials available. Our select veneer faces are hot pressed to your choice of substrates to assure a superior bond.

### CUSTOM CAPABILITIES

If your customer wanted something ordinary, they probably wouldn't have come to you. We are not in the "ordinary" business! We can provide panels which are sequence matched, end matched, cut-to-size and produced using fancy sketched faces. We offer sizes up to 5' wide x 12' long (or 12' wide x 5" long crossgrain) and we have the ability to sand crossgrain panels. Simply put...We Manufacture Solutions.

### MINIMUM ORDER QUANTITIES

While we have ample capacity to accommodate even the largest orders, we understand every order doesn't require truckload quantities. We don't have a "truckload only mentality". If you have a need, we have an interest in helping.

### LEAD TIMES

You need it when? Chances are, we can help. Most requirements can be shipped in approximately two weeks from the order date.

## Jacaranda, Inc.

### JACARANDA ARCHITECTURAL PANELS:

Choose from a large selection of plywood and composite fiber panels in a wide variety of plys and cores

Jacaranda exotic and domestic veneer faces, and custom lay-up of select flitch veneer is also available. Nothing matches the natural beauty of real wood. No other surfacing material even comes close to offering the versatility and design features possible with real wood veneer.

Jacaranda's wide selection of wood species and veneer figure patterns offer the designer and custom cabinet maker a broad spectrum for integrating color with overall design patterns. The woods used to manufacture Jacaranda products are carefully selected and matched to produce durable and artistic flexible veneers of "AA" grade quality. Veneer flitches are stocked in a large variety of popular species and figures, including plain sliced, quarter or rift cut, and much desired burls and birdseye's. It may be ordered in less commonly available species or manufactured as custom match patterns with integrated designs. Panel face veneers are typically pre-sanded to 280 grit at the factory and will accept a wide variety of finishes, including lacquers, resins, varnishes and oils.

All these features and conveniences add up to two more Jacaranda benefits - lower cost and shorter completion time. Quality, convenience and economical application - Jacaranda is the beauty of real wood.

***Note: Contact your local McKillican location for complete details or for a price quote on your current project.***
